Director, Research and Innovation, CBSET Inc.

“CBSET's multi-disciplinary approach can integrate computational modeling of drug release, absorption and local tissue distribution. We pair the complexities of anatomic and surgical methods with a deep understanding of drug kinetics to meet a Sponsor's needs in a variety of applications, including drug-material interactions and formulation, controlled-release therapeutics, and combination drug-device products.”

Over the past decade CBSET has partnered with more than 400+ MedTech and BioTech companies, including start-ups and industry-leading corporations, enabling them to initiate clinical studies and gain subsequent US and OUS market approvals for their novel therapeutic, imaging and diagnostic technologies.
